

A Clear Vision, Plus So Much More

VisionSPS Plus web-enabled, paperless physician information

VisionSPS Plus

VisionSPS Plus contains all of the powerful features of VisionSPS Core (physician credentialing, integrated paperless management, webNetwork), Plus the power of VisionPrivileges, VisionDirectory, VisionResponse and VisionApplication; the backbone of paperless credentialing. These networked bundles include licenses for three users.

Bundled Includes

VisionApplication

The starting point for the complete electronic credentialing file. This tool allows providers to complete an easy to use on-line application on a secure website. Once the data is completed correctly, any number of hospital, state, or insurance applications can be auto-populated and then pushed directly into the physician database. Required fields, with visual indicators, help assure that medical staff personnel only receive complete and legible applications. With VisionApplication, the application process is vastly more efficient than its paper intensive predecessor.

Medical staff users will be notified via e-mail once an application is completed on-line by the provider. Data from completed applications can be directly uploaded into the Vision database after verification and approval.

Data for re-appointment applications can also be updated by providers using VisionApplication. The provider can simply view their profile data, make updates as needed and attest to their information on-line. Re-appointment application forms can then be auto-populated with current provider information.

VisionDirectory

This tool can be used internally as a reference tool and/or externally as a public provider directory. The information that populates the directory is pulled directly from the Vision database in real time.

VisionPrivileges

Provide instant access to real-time, read-only access to provider privileges via the internal Intranet (not external Internet). Users may search by provider or by privilege anywhere, anytime, from any browser. This application searches and reads real-time privilege data directly from the Vision database. For added security configure VisionPrivileges to use login and password.

VisionResponse

Save valuable time by allowing requesting facilities a self-service option to print an online affiliation letter for providers that are currently in good standing. With the physician status information being pulled directly from the Vision database, there is no need for manual processes. The affiliation letter does not include any physician identity data such as birth date or SSN.

VisionSPS Core Inclusions

- **Comprehensive Credentialing**
Powerful, intuitive screens and data elements to manage a practitioner profile from initial appointment to re-appointment, including all of the required data to meet JCAHO or NCQA standards.

- **Paperless Physician Files**
Efficiently organize and index documents stored on a variety of storage media. The system retrieves documents instantly for editing, annotating, and/or integration into the physician database. Users can capture, share or distribute documents via LAN, WAN, Internet/intranet, e-mail, fax, groupware, CD, or printed copy.

- **Web Enabled**
Advanced Internet Security Services provide "worry-free" publishing and control of both confidential and proprietary data. All traffic is routed through secure ports and all data is encrypted with today's strongest security technologies.

- **Primary Source Interfaces**
A report is electronically received from the Primary Sources into the Vision software. Positive matches will be identified and electronically stored as part as the paperless physician file.

- **Dashboard**
Advanced Reporting contains 100 standard reports that can be accessed, queried and run directly from the Vision system. Reports can be run on the entire staff, provider groups, or on an individual basis.

- **Remote Single Sign on Authentication**
Give users secure, reliable, remote access while providing access to various applications and to all Vision services with a single user ID and password.

More Than Just Credentialing

Essential for any hospital, large or small, that is looking to increase patient safety. With a web enabled, paperless credentialing core, desktop dashboard and powerful product add-ons it is easy to see why SPS is the leader in physician information management. GetProof believes in providing complete solutions that complement and go hand in hand with the way you do business.
